

CS 210

Notes on handing in programming assignments

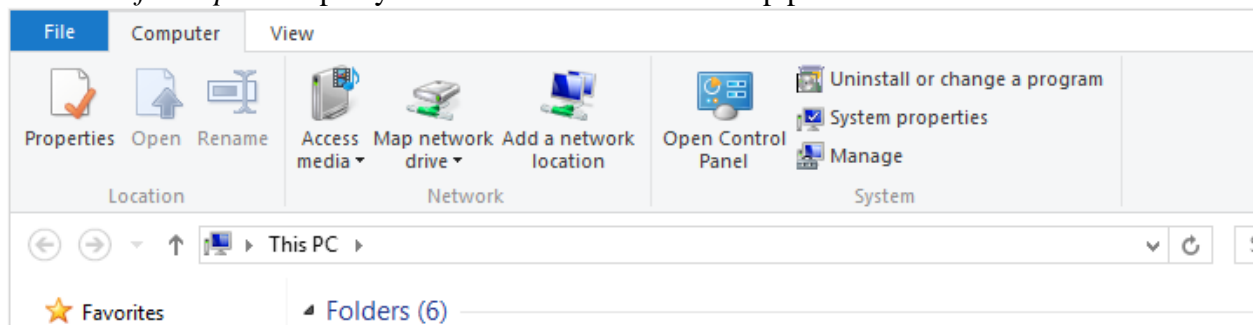

A typical C# assignment for CS 210 is saved in a project folder which may contain several other files – for example the list file, the source file, the executable file, the debug file, etc. All of these files are needed for grading. When you turn in an assignment you must turn in the entire project folder.

You should compress the project folder with its many files into a single zip file. To do this right click on the project folder and from the menu select *Send To* → *Compressed zip folder*. After compressing the project folder rename it as *Asn##XXX.zip*. where ## is the assignment number and XXX are your three initials. For example if a student name Phineas T. Bluster is handing in assignment 3 he would name the file *Asn03PTB.zip*.

Once you have the zipped file that contains the project and the design, upload it to <\\cecsfp01\users\everyone\CS210>. To do this click on the *file explorer* icon at the bottom left

corner of the desktop .

When the *file explorer* opens you will see a screen whose top part looks like this:

Type <\\cecsfp01> where it says "This PC" and click on users → everyone → CS210. Drag and drop your zipped folder to this location.
