1) The human audio range extends from approximately 50 Hz to ________.
   a) 20 kHz                             b) 20 MHz

2) Unlike passive filters, active filters can provide ________ gain.
   a) voltage                             b) power
