Lecture 35
Quiz
EE343 Quiz

1) In the capacitor selection procedure for a CS/CE amplifier we let one capacitor determine the low-frequency cutoff and then _________ the other two capacitance values.
   a) increase                   b) decrease

2) In the mid-band external capacitances are treated as _________ circuits.
   a) short                   b) open
1) In the capacitor selection procedure for a CS/CE amplifier we let one capacitor determine the low-frequency cutoff and then ________ the other two capacitance values.
